## **Amendments to the Specification:**

Please replace paragraph 0065 with the following amended paragraph:

[0065] Embodiments of the present invention may find application in aqueous and/or non-aequeous non-aqueous battery systems that exhibit, for example, the generation of gas pressure within the cells at the end of charge and/or discharge. The examples cited herein are described with reference to cells that utilize, for example, the nickel metal hydride chemistry, but the invention may be applicable to other nickel type batteries such as nickel cadmium, nickel zinc, nickel iron and/or other types of batteries that generate gas pressure in their cells at the end of charge and/or discharge due to electro-chemical or thermal effects.
